

Final annotation, 57 clusters at resolution 1.0
895,228 cells | 9 datasets | 182 samples | cluster ids labelled where n > 8,000

- HSPC/progenitor

Blast-like

Myeloid

T/NK
- B/plasma

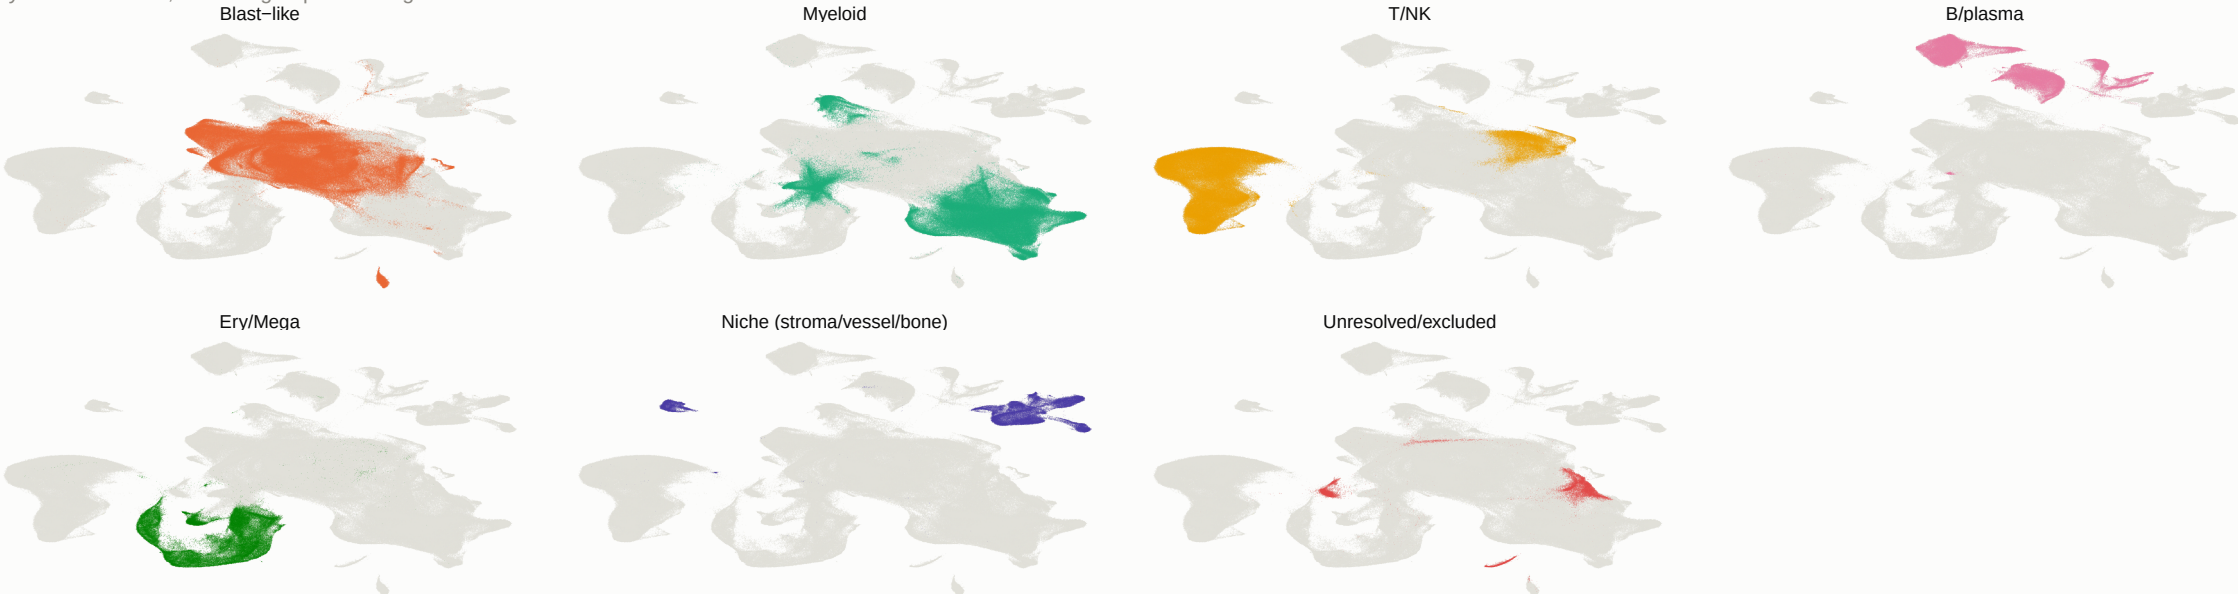

Ery/Mega

Niche (stroma/vessel/bone)

Unresolved/excluded

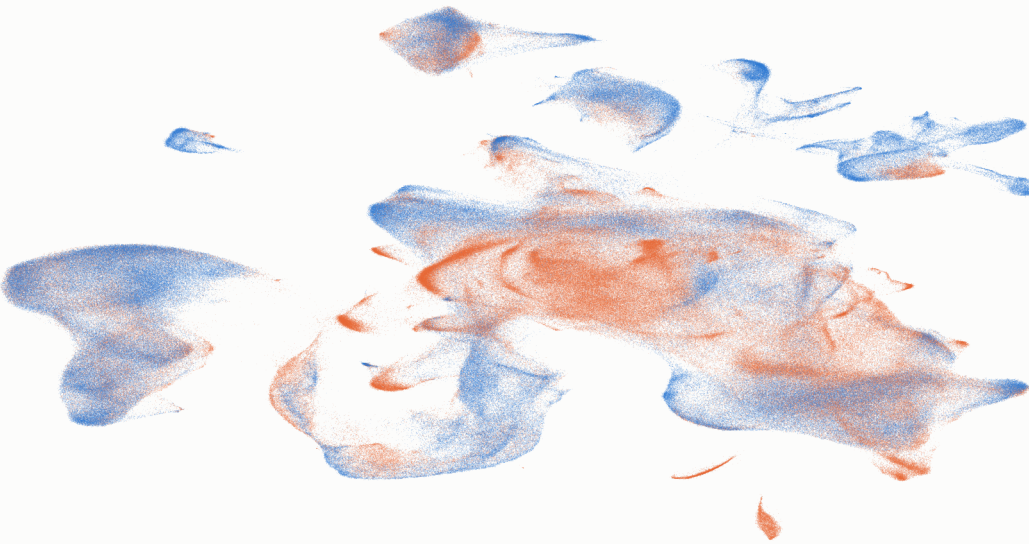

The same eight groups, one panel each

grey = all other cells, so each group is read against the whole manifold

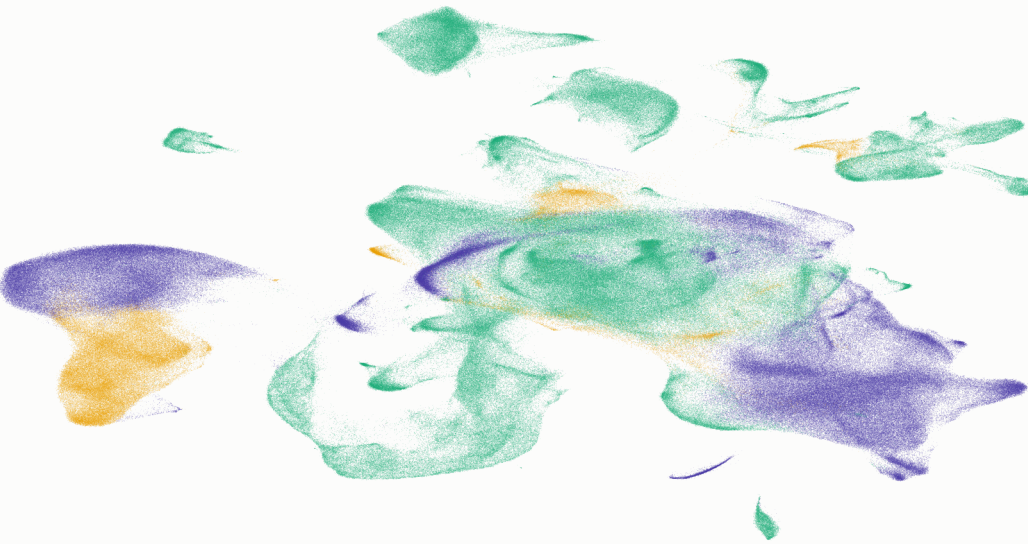

AML vs Control

107 AML / 75 Control samples

How each label was reached

agreed = both methods; adopted = old label was Ambiguous; disputed = settled on four evidence streams

Lineage composition per dataset

the table view the contrast check obliges: ws_composition_table.csv
